

## QUALITY, ENVIRONMENT AND ENERGY POLICY

CADAGUA, a company specialized in the design, construction, installation, commissioning and operation and maintenance of sanitation and water supply systems, drinking water treatment plants, municipal and industrial wastewater treatment plants, seawater and brackish water desalination, biosolids thermal drying, composting, codigestion and landfills for clients of the public and private sectors, is committed by this document to:

- Fulfil the requirements of its **public and private clients**.
- Comply with **legal and regulatory requirements** and commitments voluntarily observed.
- Periodically establish and verify the **fulfillment of objectives** and goals, devoting to it the necessary resources
- **Protect the environment** and **prevent the pollution** in a global way, minimizing the impacts derived from its activities (solid wastes and liquid effluents, atmospheric emissions and other sources of possible nuisances).
- Boost the **creation of environmental value** by integrating its activities in the communities where it operates.
- **Use energy efficiently** managing our energy consumption efficiently reducing emissions, aware of our contribution to climate change.

This commitment is met through the installation of a Management System that ensures the fulfilment of the above-mentioned issues and improves its efficiency continuously through:

- The application of the acquired knowledge by dialoguing with the interest groups.
- The motivation and training of personnel.
- The extension of the commitments with the external client to the **internal client**.
- The application of sustainability criteria within the development and performance of the activities according to the Grupo Ferrovial principles.
- The application of energy efficiency criteria in the procurement of products and services as well as in the design of its processes and activities carried out.

Madrid, May 22<sup>nd</sup>, 2020.
