

NEW CONTRACTS, CONSTRUCTION, UNITED STATES

Ferrovial awarded water contracts in Texas worth USD 279 million

- Georgetown, San Angelo and Manadas Creek have selected PLW Waterworks to execute water treatment projects
- PLW Waterworks is a subsidiary of Webber and Cadagua that specializes in waterworks

Madrid, 20/04/2022. - Ferrovial, through PLW Waterworks, has been awarded three water projects in Texas (USA). Worth a total of USD 279 million (equivalent to approximately €256 million), the contracts cover the construction of water treatment plants.

Georgetown has selected PLW Waterworks to undertake the largest project in the city's history. The contract, worth USD 175 million (approximately €160 million), consists of the construction of a treatment plant to supply drinking water to one of the fastest-growing population areas in Texas. The scope of work includes construction and commissioning of the structures for the new plant, a new water intake, and a pumping station on South Lake. The project is scheduled for completion in 2026.

The City of San Angelo has also selected PLW Waterworks, a subsidiary of Webber and Cadagua, to upgrade the Hickory groundwater treatment plant. Scheduled for completion in 2024, the project will expand the infrastructure's capacity by 30 million liters per day (8 MGD) to over 45 million liters per day (12 MGD). The contract value is USD 53 million (about €48.5 million), and the work includes construction and commissioning of a triplex low-head pump station, two new precast concrete clear wells and the expansion of the oxidation contractor system.

The third contract awarded to PLW Waterworks consists of building the Manadas Creek wastewater treatment plant for USD 51 million (about €47 million). This project will require the construction of a wastewater treatment plant with a capacity of 18 million liters per day (4.75 MGD) as well as a gravity outfall pipe to carry the treated water to Manadas Creek Tributary 2.

These three projects contribute to Ferrovial's Horizon 24 plan, which identifies the United States as a core market. They also strengthen the company's focus on sustainable infrastructure with a positive impact on the environment and communities, as is the case with water treatment plants. Ferrovial Construction has been operating in the USA for over 15 years, where it has built vital infrastructures such as the Dallas-Fort Worth managed lanes and segments of the SH 99 Grand Parkway in Houston.

About Ferrovial

Ferrovial, a leading global infrastructure operator, is committed to developing sustainable solutions. It is a member of Spain's blue-chip IBEX 35 index and included in the Dow Jones Sustainability Index and FTSE4Good; all of its operations are conducted in compliance with the principles of the UN Global Compact, which the company adopted in 2002.
